

Fannin Innovation Studio

WE'RE HIRING!

Have you been contemplating a career outside of academia?

Do you want to contribute to a collaborative team environment developing the next generation of therapies to impact patients' lives?

Would you like to make a lasting impact on the start-up ecosystem in Houston?

Become a Fannin Entrepreneurship Fellow!

As a Fannin Fellow you will be a key member of a diverse, highly skilled team, gaining hands-on experience with drug development as you help solve problems that have the potential to impact patients' lives. Think of the Fannin Fellowship as an entrepreneurship post-doc.

During the two-year program, you will:

- Learn about life sciences technology development as you contribute to a variety of projects across Fannin's therapeutics portfolio
- Complement hands-on training with our didactic Fellow Development Program
- Build a network of biomedical entrepreneurs and other industry professionals
- Attend industry workshops and conferences

REQUIREMENTS

You need to have a passion for drug development and be willing to roll up your sleeves to do whatever is required in an intense but supportive startup environment. Your unique background in science or medicine, including a doctoral degree or equivalent and a record of academic success is desired. Leadership and commercialization experience is a plus. Fannin's collaborative workplace environment is committed to diversity, gender parity, and inclusiveness.

All applicants must be authorized to work lawfully in the United States without sponsorship for the duration of the fellowship. Compensation for fellows is based on the NIH postdoctoral fellow stipend levels.

TO APPLY: Submit a two-page CV/resume and a one-page statement of interest to Serena Miggins at serena@fannininnovation.com. Please put "2018 Entrepreneurship Fellow Application" as email subject.

DEADLINE: July 22, 2018
